Atlas Lithium Corporation ("Atlas Lithium" or "Company"), a leading lithium exploration and development company, is pleased to announce that it was invited to co-host Brazil Lithium Summit 2024. Brazil has established itself as an emerging leader in environmentally sustainable lithium production. With proven hard-rock lithium reserves and a government committed to responsible mining practices, the nation is poised to become a major supplier of this critical mineral needed for electric vehicle batteries and clean energy storage.

It is in this spirit that Atlas Lithium has been invited to co-host the Brazil Lithium Summit on June 12-13, 2024, in Belo Horizonte, Minas Gerais. Officially endorsed by Invest Minas, the Summit serves as the premier platform connecting key Brazilian stakeholders with the premier lithium companies operating in Brazil.

Marc Fogassa, the Company's CEO and Chairman, commented: *"We are thrilled to support this significant event which provides an opportunity for the Atlas Lithium team to showcase its contribution towards building a thriving yet sustainable lithium industry in Brazil."*

With a focus on both immediate opportunities and long-term strategic planning, the Brazil Lithium Summit facilitates partnerships and conversations to realize the nation's enormous potential. Delegates representing all aspects of the lithium value chain will attend to learn about the current progress and future plans for developing Brazil's untapped lithium resources.

"Brazil has all the essential elements for lithium production done right - high-quality lithium, a qualified workforce, hydroelectric and other renewable power sources" added Rodrigo Menck, Atlas Lithium's Advisor based in São Paulo, Brazil.

Atlas Lithium Corporation is a U.S.-based mineral exploration company with the largest size and breadth of exploration projects for strategic minerals in Brazil, a premier mineral jurisdiction. We intend to be a leader in the provisioning of minerals essential to the transformation of the global economy from fossil fuels to electrification, a process which is expected to take decades.

Atlas Lithium's properties encompass approximately 75,542 acres (306 km²) for lithium, 137,883 acres (558 km²) for nickel, 30,009 acres (121 km²) for rare earths, 22,050 acres (89 km²) for titanium, and 13,766 acres (56 km²) for graphite. Atlas Lithium also owns multiple mining concessions for gold, diamond, and industrial sand.
